Customers

- Potential college students and undergraduate students.
- Undergraduate students looking for internships.
- Individuals returning to school to pivot to another career.

Problems that each proposed project solves and justify its need.

- People investing in a college degree need better guidance when it comes to the job market and what they can expect during and after graduation. A degree can be a very expensive and time-consuming pursuit that needs to be well considered before signing up for courses, and potentially loans that must be repaid. There are a lot of career options available and many of them do not require the significant time and financial commitment that a college degree comes with.

Product vision and how your web-based project would be useful to society.

- Signing a promissory note is the easiest part of any college career. Once a student's financial situation is remedied, the real workload and stresses are revealed. Completing assignments and searching for a job can be taxing. While universities do a good job with resumes and interview preparation, potential and current students need at-a-glance data to make informed decisions on their future.

Major features of each of the proposed projects.

- Easy to read data and projections to help potential and current students (and families) make informed decisions on college.
