

Thomas's Idea

Github:

<https://github.com/tcowie1/3155FinalProjectRepo/tree/main/Documentation>

Names:

Thomas Cowie, Casey Oates, Eric Betties, Symon Burchill

Dataset:

<https://www.kaggle.com/gpreda/covid-world-vaccination-progress>

Potential Customers:

Students are wondering when school will be normal again.

People in countries still in lock down wondering when they'll come out.

Those with comorbidities worried about socializing and looking for ideas on when they want to get more social.

What's the Problem:

The current issue with covid tracking is that all of the data is stored on governmental websites and over the past few years people have started to be cautious of where they get information and many have stopped watching the news due to the anxiety it drives.

Product Vision:

A website that displays all of the data in different ways to make it easy for the readers to gather the information they're looking for without any of the bias or pop ups, just simply the data, where it came from, and different ways to visualize it. Data plain and simple.

5 Major Features:

Bias free, no opinion pieces or comments sections for the data.

Open data - provide datasets, and show where we get the data from.

Visualize the data in many different ways.

Have an area of the site away from the data and homepage for open discussion with people from all over the world.

Show covid infections as well as vaccinations.
